

Clue

The Operating System for Shared Ownership

Clue lets teams tokenize real-world assets, define ownership splits using ERC-1155,
and receive automated payouts on BNB Chain.

THE PROBLEM

Shared Ownership is Broken

Co-owning real-world assets today means spreadsheets, legal fees, trust issues, and manual payouts. There is no infrastructure for teams to collectively own, manage, and profit from assets together.

No Transparency

Ownership records live in email threads and drawers. Disputes are common and costly.

Manual Payouts

Someone must calculate splits, collect income, and distribute — every single month.

Illiquid Positions

Once you are in, you cannot easily sell your share. Capital gets locked for years.

High Barriers

Legal fees, minimum investments, and geographic restrictions keep most people out.

THE SOLUTION

Clue Fixes Everything

A complete operating system for shared ownership — tokenize any asset, define splits on-chain, and let smart contracts handle the rest. No spreadsheets, no middlemen.

- 1 Create an Asset**
Register any real-world asset — property, business, or investment deal — in minutes.
- 2 Define Ownership**
Assign percentages to stakeholders. 40% you, 30% partner, 30% investors.
- 3 Mint Shares (ERC-1155)**
One asset = one token ID. Multiple owners hold fractional shares on-chain.
- 4 Automated Payouts**
Income flows in, BUSD payouts distribute automatically based on ownership.

How It Works

01

Create Asset

Upload documents, property details, and agreements. Everything is verified and stored securely.

02

Define Ownership

Assign stakeholders and define splits. Like a modern cap table, but on-chain and enforceable.

03

Automated Payouts

When the asset generates income, smart contracts distribute BUSD to all shareholders automatically.

MARKETPLACE

The Marketplace

Real liquidity for real assets. The Clue Marketplace lets shareholders buy, sell, and trade ownership stakes at any time. No lock-ups, no waiting.

P2P Trading

Buy and sell asset shares directly between users

Yield Earning

Hold shares and earn automated income from asset revenue

Instant Liquidity

Exit positions anytime — no lock-ups or waiting periods

TECHNOLOGY

Built With the Best

Privy

Seamless wallet authentication and session management for all users.

Didit

KYC and identity verification with AML screening for regulatory compliance.

OG

Encrypted decentralized storage for sensitive identity and compliance documents.

BNB Chain

Low-cost, high-speed blockchain for asset tokenization and settlements.

COMPLIANCE

Trust Built Into Every Layer

×

×

KYC Verification

Full identity verification via Didit — ID scan, liveness check, face matching.

AML Screening

Real-time anti-money laundering checks against global sanctions databases.

Encrypted Storage

Sensitive data stored on 0G with end-to-end encryption. Never on centralized servers.

On-Chain Enforcement

KYCRegistry contract enforces compliance at the transfer level. No bypasses possible.

SETTLEMENT

Powered by BUSD on BNB Chain

All settlements and payouts use BUSD, a USD-backed stablecoin. No volatility, no surprises — just predictable value flowing to shareholders.

Zero Volatility

BUSD is pegged 1:1 to USD. Payouts maintain their value.

Instant Payouts

Smart contracts distribute income the moment it arrives on-chain.

Low Fees

BNB Chain transactions cost fractions of a cent. More value for shareholders.

ROADMAP

Roadmap

Q1 2026 — MVP

- Core smart contracts (ERC-1155)
- Asset onboarding system
- KYC integration (Didit + 0G)
- BNB Chain hackathon demo

Q2 2026 — MARKETPLACE

- Marketplace launch
- Automated payout engine
- Multi-asset support
- Portfolio dashboard

Q3 2026 — EXPANSION

- EU/US regulatory compliance
- Legal framework partnerships
- API for third-party integrations
- Mobile app

Q4 2026 — GOVERNANCE

- DAO governance model
- Multi-chain expansion
- Institutional partnerships
- Cross-border asset support
